

PFI

Closed circuit cooling towers

Key benefits

- Lowest energy consumption and total cost of ownership
- Year round reliable operation
- Ideal replacement unit with certified thermal performance

PFI characteristics

Counter flow, axial fan, induced draft

Capacity range

up to 1480 kW

Maximum entering fluid temperature

82°C

Typical applications

- Medium to large HVAC and industrial applications
- Dry operation requirement in winter time

Lowest energy consumption and total cost of ownership

- [Evaporative cooling](#) for system-wide energy saving at lower operating temperatures.
- The highly efficient **OptiCoil System** increases thermal performance **up to 30%** for the same coil volume lowering the installed fan power by up to 50%.
- Elimination of potentially excessive operating costs. PFI is **Eurovent-CTI certified** for both water and glycol. This guarantees thermal performance and it eliminates field thermal performance testing costs.
- **System pump** energy savings obtained through shorter coil circuits resulting in **lower coil pressure drops**.
- **Savings on maintenance and water treatment** because the **closed loop** in PFI cooling towers ensures a contaminant-free cooling circuit.
- **Lower installed costs**. PFI has a lower weight, reducing structural and vibration isolation costs. Less glycol is required to achieve the same or higher heat transfer.
- **Water and chemical savings up to 33%** because [Baltibond Hybrid Coating](#) allows higher cycles of concentration.

Year round reliable operation

- **Trouble free process operation** - The closed loop in PFI cooling towers protects the process fluid and equipment from external contaminations.
- The thermal performance of PFI closed circuit cooling towers is tested and [certified by Eurovent](#).
- For extremely cold weather operation, switch off the spray system during periods of reduced load and **operate dry**.
- **Optimal thermal performance** through lifetime. Lab tests have proven that the OptiCoil System reduces scale formation on the coil.
- **Minimum maintenance and downtime**- Complete and easy access to all critical components, including coil.
- Easy-clean and easy-inspect PFI towers **reduce hygiene risks** from bacteria (e.g. Legionella) or biofilm inside.
- Self-cleaning **cold water basin sloping** towards drain, to prevent sediment build up.
- **Combined inlet shields** block sunlight to prevent biological growth in the tower, filter the air and stop water splashing outside.

Ideal replacement unit with certified thermal performance

- **Same or higher capacity**. Ideal like-for-like solution, performing per published ratings. The PFI is independently Eurovent-CTI certified for various process fluids.

Low noise

- A variety of fans is available to offer the perfect solution for every sound challenge.
- [Water silencers](#) achieve noise levels close to those of crossflow towers. Water silencers come always with Whisper Quiet fans.

- Factory designed, tested and rated [sound attenuation](#) is available on the discharge for further noise reduction.

Easy to maintain

- The PFI closed circuit cooling tower is **easier to maintain than** other induced draft counterflow cooling towers.
- Optional coil **inspection hatches** allow complete and easy access to heat transfer section
- **BranchLok** water distribution - each branch removable for easy cleaning.
- **Combined inlet shields** for easy no-tool removal.
- **Motor adjusters**: externally accessible and locking wrench for easy motor alignment and belt tensioning.
- Full **cold water basin access** when removing the combined inlet shields.
- **Fans easy accessible** via sliding access door.
- Optional [clean out port](#) **helps remove** silt and sludge from the cooling tower basin.
- Removable **suction strainer** anti-vortex hood.

Ship and install PFI easily

- **Guide pins** mean swift PFI cooling tower on-site assembly. The guide pins help reduce section assembly time by up to 75 %!
- Compact PFI footprint – **perfect for confined spaces**.
- **Container shipment** often possible!

Interested in the PFI closed circuit cooling tower for cooling your process fluid? Contact your local [BAC representative](#) for more information.

PFI

Closed circuit cooling towers

Principle of operation

The PFI features the OptiCoil™ System, which includes the BAC **Versapak spray water cooling medium (1)**. This improves the overall cooling efficiency and ensures an optimal cooling of the warm **process fluid (2)** inside the **coil (3)**, which is wetted by the **spray system (4)**. The Versapak is inserted within the coil structure, engineered for easy inspection. The **axial fan (5)** draws ambient **air (6)** upwards through the tower. **Combined inlet shields (7)** protect the tower from debris being drawn into the unit. During operation, heat is transferred to the spray water, and then to the atmosphere as a portion of the water that evaporates. The cooled process fluid then **exits** the unit **(8)**. The **sloping sump (9)** or basin collects the remaining water. The **spray pump (10)** recirculates the cooled water to the top of the tower. The warm saturated air leaves the tower through **drift eliminators (11)** which remove water droplets from the air.

Interested in the PFI cooling tower to cool your process fluid?

Contact your local [BAC representative](#) for more information.

PFI

Closed circuit cooling towers

Construction details

1. Material options

- Heavy-gauge hot-dip galvanized steel is used for external unit steel panels and structural elements featuring [Baltiplus Corrosion Protection](#).
- The unique [Baltibond hybrid coating](#) is an optional extra. A hybrid polymer coating for longer service life, applied pre-assembly to all hot-dip galvanized steel components of the unit.
- [Optional water contact stainless steel](#) panels and structural elements of type 304 or 316 for extreme applications.
- Or the economical alternative: a **water-contact stainless steel cold water basin**. Its key components and the basin itself are stainless steel. The rest is protected with the Baltibond hybrid coating.

2. Heat transfer media

- Our heat transfer media is a **cooling coil**. Its thermal performance is proven during comprehensive [lab thermal performance tests](#), and it offers you unrivalled system efficiency.
- **Coil only** version optionally available.
- The coil is constructed of continuous length of prime surface steel, hot-dip galvanized after fabrication. Designed for maximum 10 bar operating pressure according to PED.
- All hot dip galvanized and stainless steel coils are delivered with BAC's **Internal Coil Corrosion Protection**, to ensure an optimal internal corrosion protection and guaranteed quality.
- **Optional stainless steel coils** are in type 304L or 316L.
- **Versapak** in self-extinguishing **plastic**, which will not rot, decay or decompose.

3. Air movement system

- **PFI fan system** features two aluminium sheaves and belts. Together with the heavy duty fan shaft bearings and the BAC **Impervix** motor (external for units up to 2,4 m wide), this guarantees optimal and year-round operational efficiency.
- **Low kW axial fan(s)** in corrosion resistant aluminum, encased in fan cylinder with removable fan guard. Easy accessible via **sliding access door**. To reduce noise even further, choose for a [Whisper Quiet fan](#) with minimal impact on thermal performance.
- **Extended lubrication lines** with easily accessible grease fittings to **lubricate** fan shaft bearings.
- **Our drift eliminators** come in UV-resistant plastic, which will not rot, decay or decompose and their performance is tested and **certified by Eurovent**. They are assembled in **easily handled and removable sections**, for optimal internal access.
- Easy removable UV-resistant plastic **combined inlet shields** at air inlet. Sunlight block to prevent biological growth in tower, air filter and water splash-out stop.

4. Water distribution system

These consist of:

- The exclusive **BranchLok system**, including spray branches, external header clean out ports and non-clog plastic nozzles secured by rubber grommets. Unmatched cleaning system: **tool free branch removal** for easy inspection and flushing.
- Easy accessible **sloped cold water basin**, including anti-vortexing strainers, make up and **overflow** connection.
- Close coupled, bronze fitted centrifugal **spray pump** with totally enclosed fan cooled (TEFC) motor.
- Bleed line with metering valve installed from pump discharge to overflow.

Interested in the PFI closed circuit cooling tower? Contact your local [BAC representative](#).

PFI

Closed circuit cooling towers

Options and accessories

Below is a listing of the main PFI options and accessories. If your required option or accessory is not listed, look no further than your [local BAC representative](#).

Sound attenuation

Reducing noise at air **discharge** brings use closer to silent cooling equipment.

Whisper Quiet fan

Reduce fan noise even more with **very low sound factory-tested fans**.

Water silencers

Water silencers in the basin **reduce the noise** of the water falling into the basin.

Remote sump connection

The best way to **prevent a sump freezing** is to use the auxiliary remote variety within a heated area. Shutting off the circulating pump allows all the water in the water distribution, as well as that in suspension and the sump to drain freely to the auxiliary sump.

Basin heater package

Thanks to our factory-installed heaters, the water stays at 4°C and **never freezes**, even during equipments downtime and however cold it gets outside.

Platforms, ladders, safety cage and handrail

To inspect and maintain the unit more **easily and safely**, platforms, a ladder, safety cage and handrails can be installed.

Motor removal davit

For **easy removal or lifting** of the side motor.

Electric water level control package

For **perfectly precise water level control**, replace the standard mechanical valve with our electrical water level controller.

Vibration cut out switch

When excessive vibration occurs, this switch shuts down the fan, ensuring your cooling equipment **operates safely**.

Water treatment equipment

Devices to control water treatment are needed to ensure proper **cooling tower water care**. Not only does this help protect the components and fill pack, controlling corrosion, scaling and fouling, it also avoids the proliferation of harmful bacteria, including **legionella**, in the recirculating water.

Filter

Separators and media filters efficiently **remove suspended solids** in the recirculating water, reducing system cleaning costs and optimizing water treatment results. Filtration helps you keep the recirculating water clean.

Sump sweeper piping

Sump sweeper piping **prevents sediment collecting in the cold water basin** of the unit. A complete piping system, including nozzles, is installed in the basin of the tower **for connection to side stream filtration** equipment.

Clean out port

Clean out port **makes it easy to eliminate silt and sludge** from the cooling tower basin when cleaning and flushing the sump.

Flanges

Flanges facilitate **pipng connections** on-site.
